

One Piece, chapter 1[1]

A door is kicked off its hinges. One scene later, it’s back.

Harry Potter and the Goblet of Fire[2]

James leaves the wand before Lily. Later editions swapped them.

Sherlock Holmes[3][4]

Watson’s war wound: the shoulder in book one, the leg in book two.

Sources 1, 2, 3, 4, appendix A5

Every story world breaks.

> CanonTracker caught Watson’s wound on its own. It read 31 Sherlock Holmes documents and quoted both books.[5]

Sources 5, appendix A5

When a writer leaves, the canon in their head leaves too.

19% of narrative respondents were hit by layoffs, the most of any field in GDC's 2025 survey.[6]

Sources 6, appendix A5

The AI does the reading. People keep the say.

Your sources

Docs, scripts, recordings. Never edited.

AI proposes

Each fact with the exact sentence.

A person decides

Nothing is canon without a human.

Canon

Every fact cites its source.

Conflicts and impact

Contradictions found by rules, before release.

Shoulder or leg? Both sentences, side by side.

Hard · breaks canon · Open · Rule-based

High confidence · 85%

Same detail, two answers

⚠ Watson's wound location is "shoulder" in one source and "leg" in the other; it can only have one answer.

Source A

character

Watson's wound was in his shoulder.

> *There I was struck on the shoulder by a Jezail bullet, which shattered the bone and grazed the subclavian artery.*

A Study in Scarlet — Part I, Chapter I: Mr. Sherlock Holmes

A Study in Scarlet · v1, line 7

● Verbatim match

vs

Source B

character

Watson has a Jezail bullet wound in his leg.

> *I had a Jezail bullet through it some time before, and, though it did not prevent me from walking, it ached wearily at every change of the weather.*

The Sign of the Four — Chapter I: The Science of Deduction

The Sign of the Four · v1, line 35

● Verbatim match

A conflict in the Sherlock Holmes sample, found by a rule over accepted canon. A person decides what is true.[5]

Sources 5, appendix A5

Built on Muse. A person signs off on every fact.

Muse Spark

reads, critiques and checks continuity

Muse Voice Transcribe

turns table reads into sources

Muse Image

draws portraits for the wiki

Muse Code

works with canon over MCP

Models can read a whole story world. They still invent things. The human gate is what makes them safe for canon.[30]

Sources 30, appendix A5

Millions of people build story worlds.

Game makers

18,945

games released on Steam in 2024 (as of 30 Dec 2024)[7]

35,371 people at the 2025 Global Game Jam[8]

Serial and fan fiction

32.69M

online-literature writers in China, 2025[9]

18.47M works on AO3 (per Wikipedia)[10]

Game masters

10M

Roll20 accounts (2022)[11]

LegendKeeper: “200k+ creators” (vendor)[12]

Video creators

$12.8B TAM **$523M** SAM **$18.0M** SOM by year 5

Assumptions in A1 and A2

Sources 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, appendix A5

Open source to spread. Cloud for teams to pay.

Free

Self-host the whole app, AGPL-3.0.

Cloud

We host it for teams. Price on request.

A solo writer starts free. A team pays when it wants us to host it, so nobody has to run a server.

Sources 5, appendix A5

Go-to-market: game teams first, then every story world.

YEAR 1

Game narrative teams and game masters

Their lore already lives in docs, and their coding agents need canon to build from.

Open source on GitHub with four sample worlds · Muse Code and other agents over MCP · game jams (35,371 people at the 2025 Global Game Jam[8])

YEAR 2

Creators: serial and web fiction, webcomics, YouTube and TikTok worlds, series novelists

One world, many episodes, a fandom that notices every slip.

“Find the slip” videos on public-domain classics, like Watson’s wound · share pages and EPUB books that carry the name · creator partnerships

YEAR 3 ON

Studios: writers’ rooms and game studios

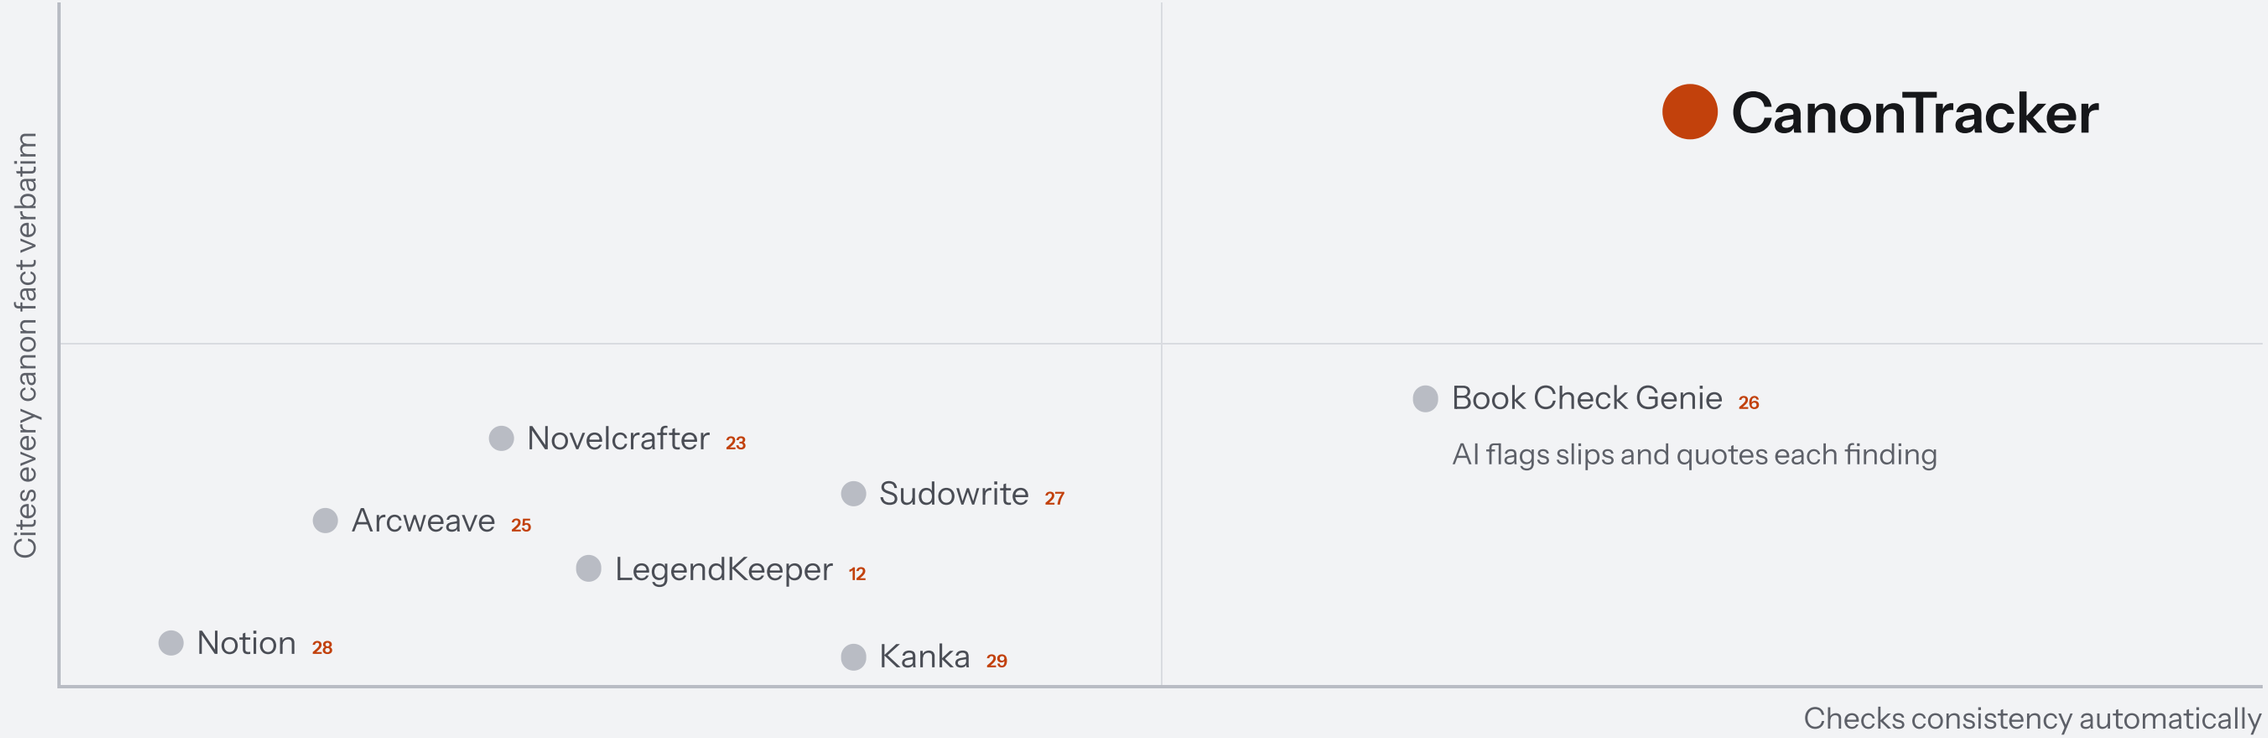

Many writers, long productions, canon that must outlive any one of them.

Cloud Team and Studio seats, sales-assisted · self-hosting support for studios that keep canon in-house

A plan, not traction yet. Seat ramp and shares in A2.

Sources 8, appendix A5

Alone in the top right.

Placed only by what each vendor's own page says (3 Nov 2026); places inside a quarter are only for legibility. Book Check Genie quotes each finding; CanonTracker cites every canon fact and checks it by deterministic rules. Table in A3.

Sources 26, 25, 12, 23, 27, 28, 29, appendix A5

A solo entry, with a company behind it.

Umurcan Görür[31]

Built CanonTracker alone for this hackathon.

- Paid to write code at fourteen
- Co-founded three companies; one closed when the money ran out
- CTO of a company of about fifty people
- Taught Ruby to around 150 students
- Builds Orka, open-source teams of coding agents, which built this

TekTık Yazılım AŞ[32]

Will develop and host CanonTracker.

- TekTık Asistan: an office assistant in WhatsApp and Telegram, in beta in Türkiye, with a UK pilot
- AI API reselling and custom AI software

Sources 31, 32, appendix A5

Create the perfect world for your story.

We’re looking for design partners: a narrative team, a writers’ room, a serial writer and a game master.

info@tektik.ai github.com/ugorur/canontracker

Appendix A1

TAM $12.8B, SAM $523M: from sourced counts

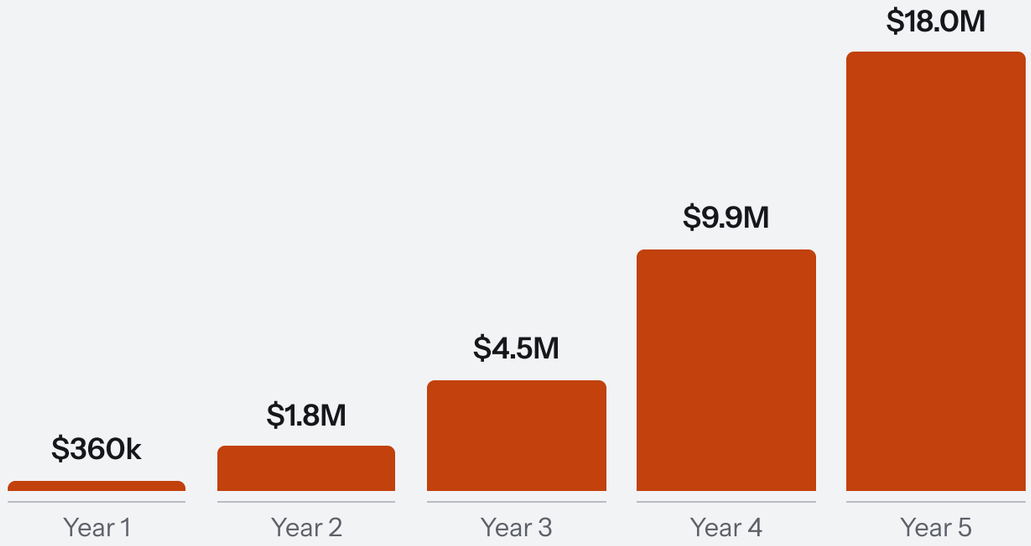

Group	Sourced base	Tier	TAM a year	Filter to SAM	SAM seats	SAM a year
Web and serial fiction writers, China	**32,690,000** online-literature writers, 2025[9]	Solo $12	$4.7B	**× 0** China's domestic market left out of SAM: hard to reach	—	—
Webcomic and web-novel creators	**27,000,000** creators on WEBTOON's platforms, 2025 (mostly amateur)[20]	Solo $12	$3.9B	**× 1 in 20** serious: pro or semi-pro	1,350,000	$194M
Game developers	**11,100,000** game developers worldwide incl. hobbyists and students, Q1 2024[21]	Team $29	$3.9B	**× 22%** in game design and narrative[22] **× 1 in 4** who write story and lore	610,500	$212M
Game masters	**10,000,000** Roll20 accounts, 2022[11] **× 1 in 5** who run games = **2,000,000**	Solo $12	$288M	**× 1 in 4** who keep written campaign lore	500,000	$72.0M
Novelists and series authors	**252,000** authors in Novelcrafter's community (vendor claim; a floor, no sourced global count)[23]	Solo $12	$36.3M	all of them	252,000	$36.3M
Screenwriters	**14,000** WGA West members (per Wikipedia)[18]	Studio $49	$8.2M	all of them	14,000	$8.2M
Total			**$12.8B**		2,726,500	**$523M**

- Dashed = our assumption. **Assumed prices for sizing**: Solo $12, Team $29, Studio $49 a seat a month, AI usage not counted; cloud pricing is on request. $ a year = seats × price × 12.
- Groups may overlap (a game developer can be a game master); overlaps are not removed. Not counted, no sourced count: YouTube and TikTok creators, other guilds, authors beyond one tool.
- SAM keeps English-language reach and people serious enough to pay. They already sign up for such tools: LegendKeeper 200k+ creators[12], Kanka 225,000 accounts.[29]

Appendix A2

SOM $18.0M a year by year 5

Tier (assumed price)	SAM seats	Year-5 share	Seats	ARR
Solo, $12 a seat a month	2,102,000	3%	63,060	$9.1M
Team, $29 a seat a month	610,500	4%	24,420	$8.5M
Studio, $49 a seat a month	14,000	5%	700	$412k
Year 5			**88,180**	**$18.0M**

- Solo: webcomic and web-novel creators, game masters, novelists. Team: game developers. Studio: screenwriters. Year-5 shares (3%, 4%, 5%) and the ramp (2%, 10%, 25%, 55%, 100% of year 5) are our assumptions.
- For scale, the creator economy these people work in: $250B in 2023, about $480B by 2027 (Goldman Sachs via Investing.com). A broader market, not ours.[19]

Appendix A3

What each vendor's page says

Product	Cited facts	Rule-based checks	Human gate on AI	API / MCP	Price
CanonTracker	Every fact, verbatim, checked	Yes: time and place, travel, relationships, same detail	Yes, always	MCP (38 tools) + API	Free self-host; cloud: ask
Arcweave[25]	—	—	—	REST API + MCP (Team tier)	Free; $15–$30 per member/mo
Book Check Genie[26]	Each finding quoted, with chapter references	AI "flags possible slips"	Yes: "the final call is always yours"	—	£19/check; £22–£49/mo
Sudowrite[27]	—	—	—	—	$10–$44/mo
Novelcrafter[24]	—	—	—	—	$4–$20/mo
Notion[28]	—	—	—	Public API	Free; $10–$20 per member/mo
LegendKeeper[12]	—	—	No generative AI	—	$7.50–$9/mo

- "—" means the vendor's own page didn't say, checked 3 Nov 2026. Kanka (225,000 accounts, 27,000 active in 2023) is a source-available campaign wiki.[29]
- Where they are stronger: Arcweave already ships an MCP server; Sudowrite and Novelcrafter write prose and we don't; World Anvil, Notion and Kanka have communities we don't have yet.

Appendix A4

What exists today, from the repository

9

days, 27 Oct–4 Nov 2026, solo, 260+ commits

4

sample worlds, up to 31 documents and 126,658 words

40

scripted probes and checks that drive the real app

38

MCP tools, under the same roles as people

- Sherlock Holmes gold set: all 4 planted contradictions found (4/4), 62 AI candidates blocked because their quote isn't in the text, every target met.[5]
- 23 real Meta API responses, recorded and replayed as contract tests; 15 notes for the Meta API team.[30]
- Every AI run is traced on Agent activity. Open source under AGPL-3.0. No users or revenue yet: this is day zero.
